Rohit Kumar Singh

Technical Program / Project Manager | Data Platform, Analytics & AI

Kolkata, India | singhrohit.25119@gmail.com | +91-8967725119 | linkedin.com/in/rohit-kumar-singh-a61746156

PROFESSIONAL SUMMARY

Technical Project Manager with 6+ years in IT, delivering data and AI projects for US Fortune 500 clients. Run 4-5 projects at a time, worth $500K-$2M and staffed with 12-15 engineers, owning client expectations, scope, timeline and budget through to go-live. Trusted by clients for reliable delivery and open communication, with 3 extending into a separate area of data engineering work, or into analytics or AI/ML work, with us after their data migration. Also build AI agents that save a 70-member project management team 4-8 hours of work a week.

EXPERIENCE

Project Manager

phData — Dec 2022 – Present

Program delivery

- Own end-to-end delivery of 4-5 concurrent data programs ($500K-$2M each) for US Fortune 500 clients as project manager, covering client expectations, scope, timeline and budget, with a dedicated team of 12-15 engineers on each.
- Programs migrate clients' legacy systems to Snowflake and AWS and move their reporting to Tableau and Sigma, with engineers building using Claude Code and Snowflake Cortex Code.
- 3 clients extended their engagements into analytics and AI/ML work after the data migration, earned through reliable delivery, full ownership and open communication about challenges.
- After kickoff, estimate the engagement and plan the backlog with the engineering leads who own solution and technical design, then plan, track and deliver each workstream from development to production using Agile sprint planning or a hybrid sprint-and-milestone approach, depending on the project.
- Run program governance, including risk and dependency management: maintain the risk register and decision log, log open dependencies before the first sprint, and track blocked work across projects in Jira dashboards.
- When client-side blockers or delivery dates are at risk, escalate early to client leadership with options to resolve them and a revised timeline where needed, and agree the way forward with the client and engineering leads.

Client and commercial

- Keep client VPs, directors and C-level sponsors informed through weekly updates, executive dashboards and QBRs, and keep cross-functional teams (sales, engineering, leadership) aligned on status.
- Handle new client requests and changes beyond the SOW: assess impact and options with engineering, re-plan the timeline and agree a change order with the client.
- Own program financials: maintain the budget and forecast, run monthly invoicing for all projects, track actuals and burn-down against forecast, flag variance, and work with sales on extension and cost estimates.

AI for program operations

- Build AI agents in Claude and Glean for project operations, including a month-end billing audit that runs 17 checks on timesheets, billing rates and holidays for hourly-billed (T&M) projects, lists each issue with a fix, and cut a 10-hour manual review to under 30 minutes.
- Built multiple AI agents used across a 70-member project management team that take over routine project management admin (project setup, weekly status updates, dependency tracking), saving 4-8 hours of work a week and freeing project managers for delivery and clients.

Change Manager, IT Infrastructure

British Telecom, Kolkata — Aug 2020 – Nov 2022

- Managed 50+ changes a year to live IT systems, such as network, server and application updates. For each one: checked the risk, got approval, set the date, prepared a rollback plan and confirmed it worked after release, so systems kept running without disruption.
- Presented each change to the Change Advisory Board (CAB), a panel of senior IT leaders who approve or reject changes, and told affected teams what was changing and when, before and during the change.

SKILLS

Core Skills: Project Management, Program Management, Project Planning, Project Execution, Project Delivery, Stakeholder Management, Cross-Functional Collaboration, Executive Communication, Risk Management, Dependency Management, Budget Management, Forecasting
Methods & Governance: Agile, Scrum, Kanban, Hybrid Delivery, Software Development Life Cycle (SDLC)
AI & Automation (hands-on): Claude, Claude Code, Glean Agents, Google Apps Script
Project Tools: Jira, Confluence, GitHub Projects, Azure DevOps, Asana, Kantata, Salesforce

AI PROJECTS

- Built and launched an online store using Claude Code to write the code, Vercel to host it and Supabase to store the data; also built custom Claude skills that connect to other tools through MCP.

CERTIFICATIONS, AWARDS & EDUCATION

- **Claude Certified Architect – Foundations**, Anthropic | Verify on Credly
- **Professional Scrum Master I (PSM I)**, Scrum.org
- **ITIL Foundation**, Axelos
- **Bachelor of Computer Application (BCA)**
