Rohit Kumar Singh

Technical Project Manager | Data Platform, Analytics & AI Programs

singhrohit.25119@gmail.com | +91-8967725119 | linkedin.com/in/rohit-kumar-singh-a61746156

PROFESSIONAL SUMMARY

Technical Project Manager with 6 years in IT delivery, moving from infrastructure change management at British Telecom to data and AI programs at phData. Today running 4-5 concurrent data platform migration, analytics and agentic AI programs for US Fortune 500 clients, each with 12-15 engineers and a $250K to $1M budget, while acting as the main link between client executives, sales and engineering and bringing in follow-on work. As a Claude Certified Architect, now extending that delivery work into AI, with PMO agents that save 4-8 hours a week and earned phData's Innovation Award.

SKILLS

Core Skills: Stakeholder Management, Cross-Team Coordination, Executive Communication, Risk & Budget Control
Methods & Governance: Agile/Scrum, Waterfall, Hybrid, RACI, WBS, Risk Register, Decision Log, SOW, QBR
AI & Automation (hands-on): Claude, Claude Code, Glean Agents, n8n, MCP, Google Apps Script, Jira REST API
Project Tools: Jira, Confluence, Azure DevOps, MS Project, Kantata, Salesforce

EXPERIENCE

Technical Project Manager

phData — Dec 2022 – Present

Program delivery

- Run 4-5 concurrent data platform migration, analytics and agentic AI programs for US Fortune 500 clients, each with a dedicated team of 12-15 engineers and a $250K to $1M budget.
- Review client requirements and effort estimates with Principal Architects before SOW sign-off, then break the agreed scope into a WBS, RACI and Jira backlog for the engineering team.
- Run sprint planning, stand-ups and retrospectives for each program, plan sprint capacity from velocity, and keep the risk register and decision log current as work moves.
- Track lead time, throughput and blocked time across programs with Jira dashboards and cross-project JQL.
- Chase client-side dependencies such as system access, data and approvals from kickoff onward.

Client, account and commercial

- Serve as the main contact for client VPs, directors and C-level sponsors, with weekly status updates and executive dashboards across a 10-12 hour India-US time gap.
- Represent client priorities inside phData, aligning sales, engineering, architects, the managed services team and leadership on goals, delivery status and open risks.
- Set expectations on scope, timelines and trade-offs, and work out a middle ground with engineering when a client request isn't feasible as asked.
- Assess mid-project change requests against the SOW and raise change orders for out-of-scope work.
- Run monthly invoicing, forecast vs actuals and burn-down for each program, and flag budget variance early.
- Use QBRs to review challenges with client sponsors and find follow-on work, which led to account expansion.

AI and automation

- Built a Jira dependency tracker with Google Apps Script and the Jira REST API. It pulls active stories on a schedule, maps which tickets block each other and counts days blocked. Its reports replaced one engineering team's weekly status meetings.
- Built a weekly program-health agent that pulls data from several systems, scores each program's health and posts the summary to Slack.
- Built an agent with Glean that sets up new projects from signed SOWs in Salesforce and sends automated status updates to client email and Slack.
- Built a month-end billing audit agent with Glean and Claude that runs 17 checks on billing data and lists each inconsistency with an action item, plus a rollup agent that combines financial status across all my programs.
- Together, these agents save 4-8 hours of PMO work a week and earned phData's Innovation Award.

Change Manager, IT Infrastructure

British Telecom, Kolkata — Aug 2020 – Nov 2022

- Managed 50+ infrastructure changes a year across network, systems and application teams under ITIL, covering change intake, risk assessment, rollback planning and post-implementation review, with 99.9% uptime maintained.
- Presented changes at Change Advisory Board (CAB) sessions to senior IT leadership and ran stakeholder communication for each change window.

AI PROJECTS

- Built and deployed an e-commerce site with Claude Code, Vercel and Supabase, plus custom Claude skills with MCP connectors.

CERTIFICATIONS, AWARDS & EDUCATION

- **Claude Certified Architect**, Anthropic
- **Professional Scrum Master I (PSM I)**, Scrum.org
- **ITIL Foundation**, Axelos
- **phData Innovation Award** for AI agents that automated project setup, reporting and status updates
- **Bachelor of Computer Application (BCA)**
